

SIPOL[®] FOR FOOTWEAR

BROCHURE

We are a leading manufacturer of thermoplastic adhesives based on copolyester and copolyamide polymers. We provide **high quality products in both granular and rod shape 4 or 4,2 mm diameter**.

In **footwear business**, SIPOL[®]'s thermoplastic adhesives are very well known and recognized worldwide as they can be easily applied with all kinds of lasting and folding machines.

SIPOL® FOR FOOTWEAR

BROCHURE

TECHNIPOL®PA

Copolyamide based thermoplastic adhesives **TECHNIPOL®PA 167** and **TECHNIPOL®PA 162** work perfectly with all kind of lasting machines equipped with tracers.

Their softness and elasticity, together with a perfect adhesion on many substrates, make them the perfect candidate to be used in the manufacturing process of all kind of shoes: from safety to fashion models.

Copolyamide based **TECHNIPOL®PA/G** is the ideal thermoplastic adhesive for folding operations. In fact, its very quick setting time, together with its perfect adhesion, allows shoe factories to speed up the folding operations.

TECHNIPOL®

Copolyester based **TECHNIPOL® 170** guarantees a very good adhesion on a wide substrates' range of materials. Its quick setting time allows a smooth lasting operation with a short closing time of the blades.

TECHNIPOL® and **TECHNIPOL®PA** allow solvent-free solution and reversible bonding with temperature.

The absence of VOC is perfectly in line with the safety regulations not only in the workshops, but also in all those environments where the bonded parts will be put in place.

TAILORED SOLUTION

SIPOL®'s activity is strictly related to the design and development of innovative co-polyesters and co-polyamides.

Our know-how in the macromolecular field allows the company to meet customer and market requirements:

- ▶ Developing new products
- ▶ Designing tailor made product solutions
- ▶ Enhancing existing products performances
- ▶ Offering our experience and expertise in custom synthesis projects.
